

Grade distribution analysis of UW Madison dataset

Module 3 project Evgeniya Dontsova & Cristina Rico

August 23, 2019

Outline: questions to answer regarding the A grade ratio

- **♦** Evgeniya:
 - ◆ Do instructors grade differently?
 - ♦ Does class size matter?
 - ♦ Instructor grading versus class size
 - Does the field of study matter: STEM vs Humanities in term of class size?
- **♦** Cristina:
 - Does time of day matter?
 - ◆ Interaction between time of day and the filed of study: STEM vs Humanities?
 - ♦ Is the field of study significant in terms of time of day?

Researchers have come to a general consensus that **smaller class sizes** produce **positive social**, **emotional**, **and academic results**. Findings from numerous studies, including <u>Glass and Smith's</u> research from 1978 and <u>Tennessee's Project STAR</u> conducted in the mid 1980s, conclude **smaller class sizes result in higher test scores**, produce fewer dropouts, and level the playing field for minorities and children living in poverty.

Researchers generally agree a class size of **no larger than 18 students** is required to produce the **desired benefit**.

Parents across America

http://parentsacrossamerica.org/what-we-believe-2/why-class-size-matters/

1. Fact: Class size is a proven and effective reform.

Studies from Tennessee, Wisconsin, and states throughout the country have demonstrated that students who are assigned to smaller classes in grades K-3rd do better in every way that can be measured: they score higher on tests, receive better grades, and exhibit improved attendance.

Analyze instructors having most uniform teaching across class sizes
